

Hightech alternative sandbags from stormtec emergency products

The Stormbag

For use in Fresh Water only!!!

Lightweight and easy to carry, makes operation fast and efficient.

When the Stormbag is dry, it measures 14" wide and 24" long. Once it is hydrated, it measures approximately 22" long and 13" wide.

The Stormbag requires minimal storage space and is easy to deploy, compared to traditional sandbags.

NO SAND NEEDED

BAGS COME SINGLE OR IN BOXES OF 50

GARAGE DOOR KITS

Uses of STORMBAGS

[Calculate the cost of flooding](#) [Sandbagging Information](#)

Work Site Protection

The Stormbag works well for protecting your worksite. It is easy for a work crew to carry a box of 50, which will give lots of protection.

Landslide Prevention

Many times heavy rainfalls cause landslides and a quick deployment of sandbags is required. That usually means a large workforce. When disasters have struck large workforces are hard to come by. The simple and fast solution is again the Stormbag. One person can do the work of many in the same or less time.

Flood Prevention

Protect your home, your business, your library, your museum. Have a few boxes of these onsite so you do not have to depend on outside help.

Control Flooding

Control flooding by deployment of these bags just like sandbags. Soak your bags and build your wall. For tips on that please click the link above

Soak Spills

These bags are great for soaking up spills. Got water in your basement? Throw some bags down and let them go to work for you...

Building Protection

Divert water flow in a short time as demonstrated in the video.

Homeland Security has accepted this bag in their program!!

Tested by bomb squads and the national guard
